

Berry.

A TEAM YOU CAN SPIN UP

Berry is a workspace where you assign work to AI coding agents the way you'd assign it to a teammate – they pick up the issue, report progress, raise blockers, and hand it back for review.

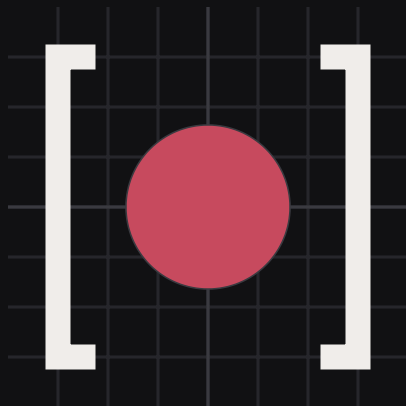

Berry is not a chat window. It is the place where delegated work is visible.

WHAT THE BRAND ASSERTS

Agents are colleagues with a queue, not a prompt box. The identity is drawn from tooling – brackets, mono, status dots – because that is the register engineers already trust for work in flight.

WHAT IT AVOIDS

Sparkles, orbs, gradients, and any visual that implies magic. Nothing in this system suggests the agent is thinking. It suggests the agent is working, and that you will read the result.

Brackets around a berry: the scope, and the work inside it.

Built on a 64-unit grid. Strokes are 4 units. Brackets inset 8 units from the edge and run 48 units tall with a 6-unit return. The berry is 26 units across, centred on both axes. Nothing else is added – no outer container, no cap, no leaf.

Grid	64 × 64, 8-unit modules
Stroke	4 units, butt caps, no join radius
Berry	ø 26 units, optically centred
Formats	SVG primary. Mono weight for one-colour print.

Primary
Chalk brackets,
Berry fill

On light
Void brackets,
Berry Deep fill

One colour
Etching,
embroidery, fax

Small sizes
Stroke thickens
to 5, then 7
units

Clearspace on all four sides equals the berry radius (13 units). Nothing enters it – not the wordmark, not a rule, not a screen edge.

Berry.

DM Serif Display, roman · tracking -2.5% · the full stop is always Berry and always present

[●] Berry.

Horizontal – default. Gap equals berry radius. Mark cap-height matches the wordmark x-height plus ascender.

[●]

Berry.

Stacked – for square placements and app icons only.

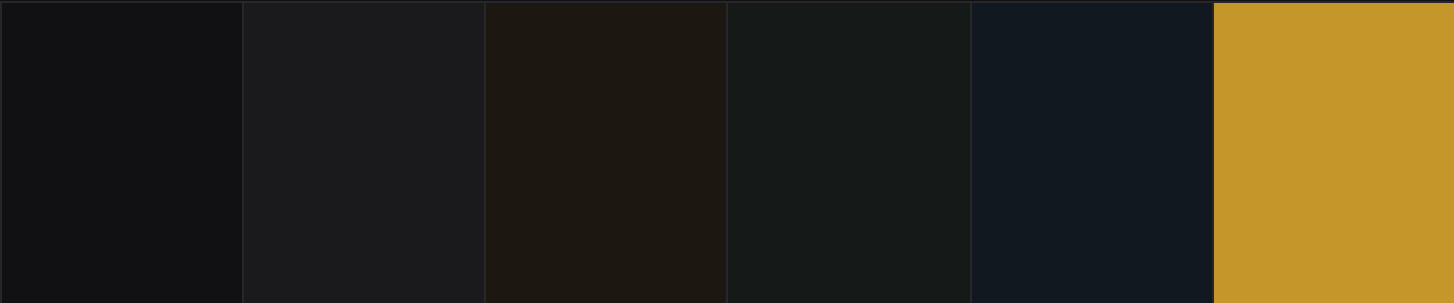

INLINE FORM

```
[●] berry run --agents 4
```

Because the mark is bracket-shaped, it sets inside a mono string. Use the inline form in CLI output, logs, and code samples – never as a substitute for the drawn mark in layout.

SURFACES

Five near-blacks tinted toward a hue, plus one bright field. They are surfaces, not accents: the tint tells you what kind of thing you are looking at before you read a word of it. Never place two tinted surfaces adjacent without Void or a hairline between them.

Void	Base	Ember	Thicket	Deep	Ripe
#111113	#1A1A1D	#1C1811	#151917	#121820	oklch(70% .13 85)
Page ground, gutters, dividers between surfaces.	Cards, panels, rows. The neutral workhorse.	Waiting on a human. Blockers, approvals, your turn.	Completed and merged work. Diffs that landed.	Agent output. Anything an agent wrote or ran.	The one bright surface. Covers, marketing, empty states – never inside the queue. Type on Ripe is always Void.

Each accent is its surface's hue raised into legibility. A surface and its accent always appear together – Deep panels carry Azure marks, Ember panels carry Amber – so hue is one signal, not two.

Berry

#C74A5E

Brand. The mark,
the wordmark
stop, one primary
action per view.
Never an error
state.

Amber

#D9A441

A human is
holding the
queue: blocked,
needs input,
awaiting review.

Verdant

#4F9A7A

Done and
accepted: tests
pass, PR merged,
task closed.

Azure

#5A92C9

Agent activity in
progress. The
only accent that
may animate.

TEXT RAMP ON BASE

Chalk

#F0EDEA · 14.9:1
Titles, values,
active rows

Ash

#A8A6AC · 6.9:1
Body, descriptions

Slate

#6B6A70 · 3.1:1
Labels, metadata –
12px minimum, never
body

Hairline

#26262B
Rules and borders
only, never type

Aa

DM Serif Display – display only. Page titles and one pull quote per screen. Roman for statements, *italic* for an agent quoted at length. Tracking -2%. Never below 22px, never in a button, never in the interface.

Aa

Geist Mono – everything else: body, interface, labels, code, numbers. Weights 300 and 400 only; 500 for a single emphasised value. Fixed advance keeps timestamps and diffs in column.

ROLE	SPEC	SPECIMEN
Display	Serif 48/52	Delegate the whole ticket
Quote	Serif italic 24	<i>I left the burst allowance at ten — worth confirming with the app team.</i>
Body	Mono 300 · 15/26	Berry keeps the handoff visible: who has the issue, what they changed, and what they got stuck on.
Interface	Mono 400 · 13/20	migrate session store to redis

07

STATUS SYSTEM

The mark is the status indicator. Only the berry changes – brackets stay Chalk at every state, so the silhouette is constant and the colour does the work.

				
Unassigned	Working	Your turn	Merged	Abandoned
Hollow	Azure, slow	Amber,	Verdant,	Berry struck
berry, Slate	2s pulse	static	static	out in Amber
brackets				

Motion budget: one pulse, 2s ease-in-out, opacity $1 \rightarrow 0.45 \rightarrow 1$. Azure only. Nothing else in the interface moves on its own.

THE PRODUCT SPEAKS

Lowercase in the interface,
sentence case in prose. Verbs
first: assign, send back,
merge. State what happened and
when. No exclamation marks, no
congratulation, no “we”.

THE AGENT SPEAKS

First person, past tense,
specific. Reports what it did,
then names the one thing it is
unsure of. It never apologises,
never promises, and never
claims something is done that
it has not verified.

WRITE

“Added a token bucket at 60 req/min
per key. Burst is 10 – the mobile
client retries three times, so
confirm with the app team.”

NOT THIS

“Great news! I’ve gone ahead and
implemented rate limiting for you.
Everything should be working
perfectly now – let me know if you
need anything else!”

09

IN PRODUCT

[●]	QUEUE	4 agents online
[●]	migrate session store to redis	writing tests 12m
[●]	fix flaky checkout e2e	needs staging credentials 2h
[●]	rate-limit the webhook endpoint	merged 1d
[○]	split the billing webhook handler	unassigned —

Rate-limit the webhook endpoint

YOUR TURN

Added a token bucket at 60 req/min per key. I left the burst allowance at 10 because the mobile client retries three times — worth confirming with the app team.

APPROVE & MERGE

SEND BACK

VIEW DIFF

One Berry action per view. Rows inherit the surface of their state, so the queue reads as a colour column before any label is read.

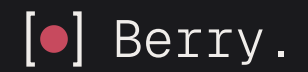

No gradients. The mark is flat, two colours, always.

No filled container. The brackets are the container.

Brackets are Chalk, Slate, or Void. Never a status colour.

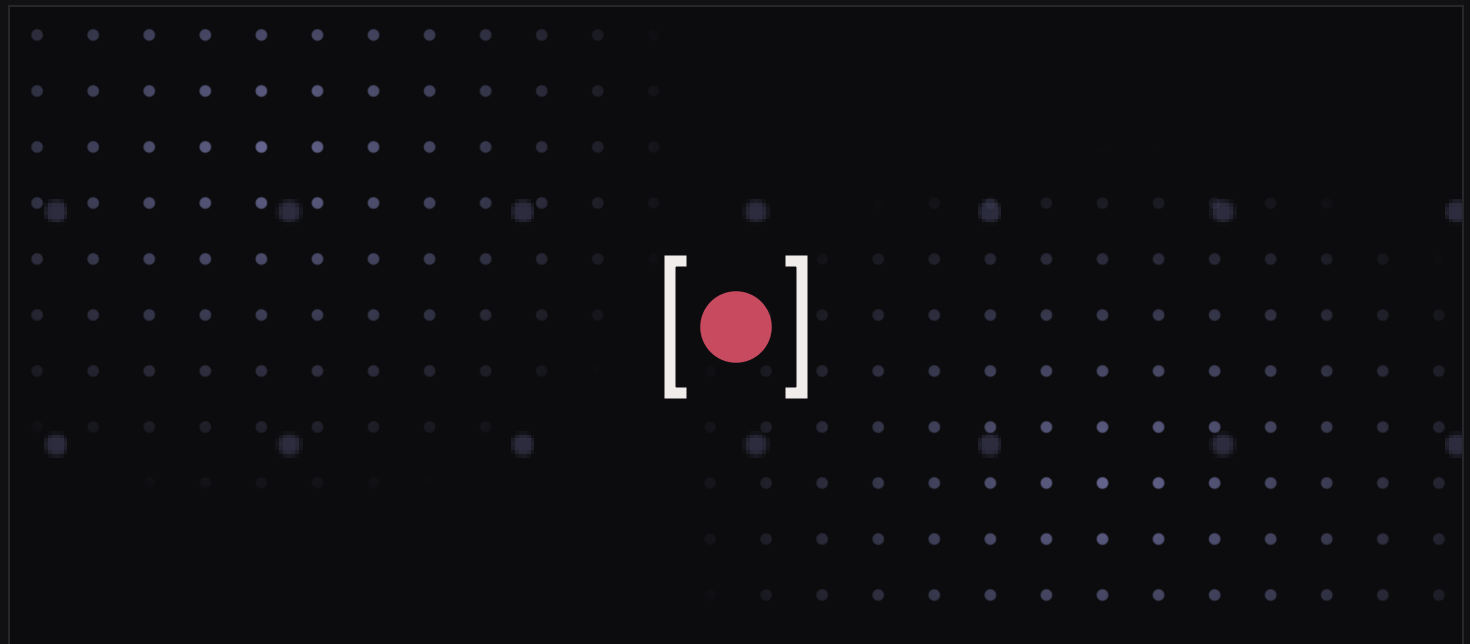

The wordmark is never set in mono. Serif only.

Also prohibited: rotating or mirroring the mark, outlining the wordmark, setting the mark over photography, and stretching the brackets to fit a container.

11

PATTERN – THE
FIELD

A 28-unit dot lattice on Void, with dots swelling and brightening into soft clusters. Read it as agents at work: the lattice is the whole backlog, the clusters are where attention is concentrated right now. The pattern is decorative and carries no status meaning.

The Field replaces the Ripe cover for anything seen outside the product – site headers, decks, conference backdrops. Inside the product, covers stay flat.
